Risk Factor	320	4

- ✓ RGS Risk And Safety Management provides an ideal solution for identifying and controlling risks in the work place.
- ✓ Meet legal requirement to have a safety management system in place to protect personnel from injuries relating to work place hazards.
- ✓ Proactive Inspection Planning ensures that inspections can be carried out and hazards identified before they cause injury or damage
- ✓ Maintains a full history of inspections results and actions taken to reduce risk of injury or damage.
- ✓ Call today to find out how RAS can help make your business a safer place to work.

Advanced Functionality

Risk And Safety Management's function is to provide a proactive environment for the management and control of safety risks.

Risk Register

The Risk Register catalogues hazards that have been identified in the working environment along with the controls required to deliver a safe system of work.

Safety Inspections

Inspections are the ongoing process of identifying hazards and potential hazards before they cause injury or damage. Items inspected are rated against an Inspection Standard, and where the required standard is not met, corrective actions must be taken.

Inspection Templates

Inspection Templates provide a comprehensive lists of items to be inspected and the required standards that must be met. Templates can be configured for workshops, offices, field work on any other working environment.

Powerful Inspection Planning

Inspection Jobs are automatically scheduled based on cycle frequencies defined in the inspection plan.

History

A full history of all inspections is available on line to enable analysis of safety performance and for improving future safety.

Integration

RAS is integrated with RGS Physical Asset Management so that Risk Register details are available on Work Orders to manage job safety.

Security

Access to data and processing options is configurable for each user's needs.

Resource Governance Solutions

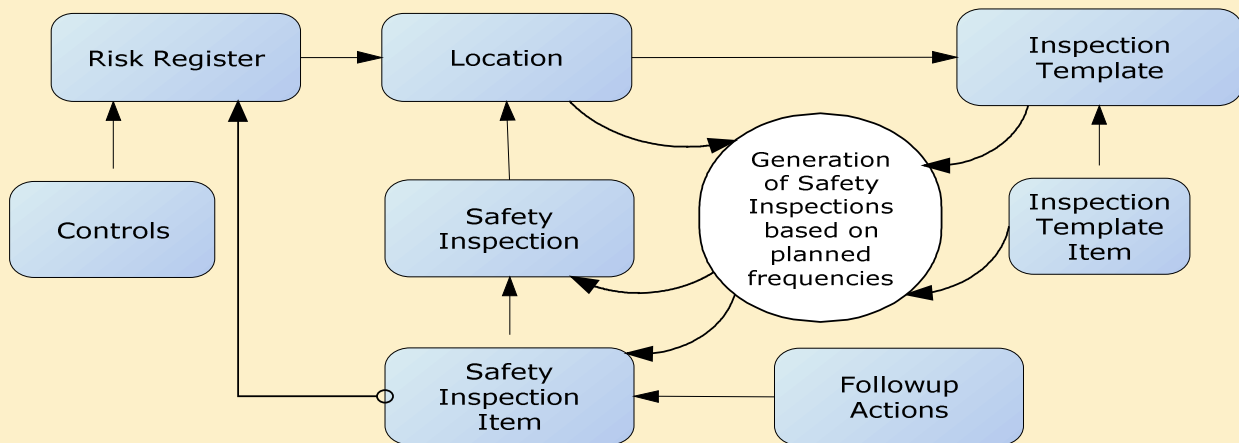

Risk And Safety Management (RAS)

Overview

It is a legal requirement for all organisations to have a safety management system in place to protect personnel from injuries resulting from workplace hazards. Safety systems vary greatly according to the profession concerned and Resource Governance Solutions' RAS module can be configured to meet your industries requirements to:

- Maintain a Risk Register to identify and assess hazards and define the controls required to reduce the risk of the hazards causing unacceptable consequences.
- Provide an ongoing Workplace Inspections system to identify potential hazards and record the actions taken to remove those hazard.

RGS Risk And Safety Management

Risk Register

The Risk Register maintains a list of all the hazards that have been identified in the working environment along with the controls required to deliver a safe system of work.

Each Hazard is categorised and assessed for the following factors:

- The Likelihood of the hazard causing injury or damage
- The Exposure level that personnel experience
- The Consequences that result

The values of these factors are then used to calculate the Hazard's Risk rating. Where the consequences can be converted into a dollar cost, a risk cost can also be calculated. Where the Risk rating is at an unacceptable level, Control mechanisms can be registered to reduce the Likelihood, Exposure level or Consequences. Controls are registered until the Risk rating of the hazard is reduced to an acceptable level.

Safety Inspections

Safety inspections are targeted to address hazards at a specific Location. Items to be inspected may be registered using an Inspection Template when the Inspection is planned so that the actual inspection is carried out using the pre planned check-list.

Templates provide a simple way to generate complete and accurate inspection checklists. Additional Inspection Items can also be added to record extra hazards identified during the inspection.

About Us

Resource Governance Solutions develops IT based solutions that simplify the challenging task of managing resources effectively and efficiently. Why not contact us today.
